Presentation

TurboGears 2 is rapid web application development toolkit designed to make your life easier.

1. Code your data model

Design your data model, Create the database, and Add some bootstrap data.

2. Design your URL architecture

Decide your URLs, Program your controller methods, Design your templates, and place some static files (CSS and/or JavaScript).

3. Distribute your app

Test your source, Generate project documents, Build a distribution.

Thank you for choosing TurboGears.

Get Started with TG2

- [About this page](#) A quick guide to this TG2 site
- [TG2 Documents](#) - Read everything in the Getting Started section
- [TG1 docs](#) (still useful, although a lot has changed for TG2)
- [Join the TG Mail List](#) for general TG use/topics
